SolarHub
UX Case Study

Omar Rahman

Problem Statement

Solar panel owners need a reliable all-in-one hub to manage installations, monitor performance, track maintenance, and maximize trusted service with consistent support and qualified leads.

Objectives & Goals

Streamline Service Management
Centralize installation, maintenance, and technician tracking for seamless service.

Ensure Trust and Reliability: Offer vetted technicians and transparent service histories for long-term confidence.

The Process

Business Challenges

- Integrating multiple services into a single, user-friendly platform.
- Maintaining real-time, accurate monitoring and tracking.
- Creating an intuitive interface for both technical and non-technical users.
- Scaling operations while preserving personalized service.
- Ensuring a seamless, consistent experience across devices.

Product Users

Homeowners and small business owners in areas with frequent power outages or high electricity costs. They value reliability, cost savings, and easy-to-use tools for performance, track maintenance, and receive issues to ensure reliable, effective power.

Quantitative Research

There has 43,000 MW of solar capacity, yet tax residential adoption. An all- in- one app could simplify management and allow more homeowners to switch to solar.

Observations

7%
U.S. homeowners have installed solar panels on their roofs - Pew Research

28%
reported being seriously considering installation. The indicates a significant interest in solar energy among U.S. homeowners - Pew Research

35%
of U.S households with internet access have smart devices in their home device. This translates to about 43.43 million homes using smart home technology.
- Statista

45%
of US households with internet access have smart devices in their home device. This translates to about 43.43 million homes using smart home technology.
- Statista

17%
of the power mix is solar and wind compared to coal's 21% in 2024. - The Guardian

20%
Save more in 2024 from previous years on taxes.
- Cleverchecks.com

User Needs

- Users need an intuitive interface to easily navigate and access key features like monitoring, service, and learning.
- Users want a single app to monitor solar output, track installations, reports, and maintenance—without switching platforms.
- Users need technicians with ratings, reviews, and transparent pricing to feel confident in booking.

Features & Functionalities

To resolve user needs

Brings answers to questions needs

Book service and installation with an expert at user's convenience

Make payment easier and provides multiple payment methods

Product User Challenges

- Trust issues with Providers Users are uncertain about the quality of third-party service providers.
- Limited Insight Users have little power details in technical format that's hard to understand for general users.
- Complex Setup The app setup process is complicated for non- tech- savvy users.
- Unclear Maintenance Alerts Maintenance and troubleshooting alerts are often too vague or complicated for users to follow.

Competitor Analysis

Enphase Enlighten

App from Enphase Energy for monitoring solar systems that integrate with Enphase microinverters.

Features:

- Daily Enphase Hardware Compatibility
- Basic alerts

Tesla Solar App

Tesla's app for managing Tesla Solar Roof and Powerwall systems.

Features:

- Real- Time Energy Monitoring
- Payment Integration

Unique Features

- **Inclusive:** Not tied to one manufacturer's ecosystem.
- **Customer- centric:** Designed for both homeowners and businesses.
- **All- in- One:** Simplifies the entire lifecycle from installation to maintenance.

User Persona

Sarah Johnson
Working Engineer

About
Age: 35
Occupation: Engineer
Salary: $
Employed

Description
Sarah is an eco- conscious homeowner working on every day to manage her solar system and savings.

Daily lifestyle
- Hands always energy savings and tracks maintenance.
- She receives performance notifications.
- In the evening, she discusses savings with her husband while managing bedtime.

Motive Pyramid

Pain points
- Lack of reliable service providers.
- Confusing app interfaces.
- Limited scheduling process for services.

"I just want an easy way to manage my solar system and know I'm saving without all the hassle." - Sarah Johnson
